Choice 1 E

**We want to introduce a new 'extra-large green space standard' which recognises that as we grow communities will need access to green spaces more than 5 hectares. Do you agree with this? - Yes / No**

Short Response

Explanation This improved standard should be applied to large brownfield sites within the city as well as to new sites on the outskirts of the city, although 3-5 hectares might be more realistic than a flat 5 hectares. For example, the proposed area for new high density house building at Seafield should very definitely include access to a large area of green space

Choice 1 F

**We want to identify specific sites for new allotments and food growing, both as part of new development sites and within open space in the urban area. Do you agree with this? - Yes / No**

Short Response

Explanation Yes, but again not applied as a 'formula', and not just as a quick and easy option. A survey of priority needs in each local area / community needs to be carried out. There are many areas that need and would rather have, say, space and facilities to occupy older children and teens (fenced 5-a-side court, skatepark etc.) A shared community garden / growing space might suit local communities better, and be more productive and more equitable than allotments for individuals. Allocation of allotments should be revised, so that only people with no garden can have one.

Choice **2 A**

**We want all development (including change of use), through design and access statements, to demonstrate how their design will incorporate measures to tackle and adapt to climate change, their future adaptability and measures to address accessibility for people with varying needs, age and mobility issues as a key part of their layouts. - Yes / No**

Short Response

Explanation We would have serious concerns if this proposal means ‘junking’ the current DES 1,3,6,7,8, HOU 4, Env 20 but we'd certainly like to see strengthening of Design Quality standards and Accessibility. The introduction states with commendable honesty: "Our design policies are generally strong and are largely fit for purpose, however we recognise that we don't always achieve the best outcomes for our city." This is quite an understatement. The patience of the citizenry has been sorely taxed by what's been going on in Edinburgh and the surrounding area for the last two or three decades (indeed much further back!), regarding new developments and the stewardship of the public realm. What we've been getting is emphatically NOT good quality, sustainable, imaginative, attractive, sympathetic and well-integrated development, and this consistent failure to achieve good outcomes continues to rankle more than somewhat on the ground among the people affected. Because of what they see around them, citizens have become firmly convinced that the council is essentially in cahoots with the developers and all too often against the local environment and against the local communities. We see student accommodation blocks cropping up all over the city at the cost of much-needed housing for permanent residents, the rash of invasive, overly dense residential "urban regeneration" projects, the variable-quality housing schemes and estates erupting in green spaces on the fringes of towns across the Lothians, the pile'em-high/sell'em-cheap ugly square housing blocks squeezed into every tiny corner, and now ribboning along the north-shore waterfront – the quality of the new-build environment permitted by this and other councils has, all too often, been emphatically not "fit for purpose". The impact of all this sub-optimal construction has been to substantially degrade and diminish not just the immediate area of the development site itself but the wider environment too – clogging up the central belt, and strangling its towns and cities. Building height / Density - There should be unambiguous rules about height and density of new building matching neighbouring buildings, also there needs to be data driven policy on the ratio of mandatory new infrastructure to match new development. We would like a pause and reset. The city is at a crossroads (as it were) and policies on development must change and improve. Because of rising house prices and shortage of housing (largely/partly driven by over-tourism, Air BnB etc.), citizens are forced to buy homes outside the city, and to commute into work, very often by private car. It is no accident that Edinburgh's commuter traffic congestion is now among the worst in the UK, whereas just a few short years ago (some of us recall) it was among the easiest, the whole city region having been snarled up by a development-led increase in traffic volumes. Accessibility - The fact that we have an ageing population needs to be taken more into consideration. There is an acute shortage of accessible housing for older and disabled people (cf 'Scotland's Hidden Crisis' by Equality and Human Rights Commission. ) A great proportion of housing in Edinburgh is inaccessible. Many ground floor flats have been removed from the housing stock thanks to the short term letting market. But ground floor flats should be protected and reserved as accessible homes. Equality and Human Rights Commission. ) Just making doors wider is not enough, all new builds must be made fully accessible and easily adaptable (eg. wet room style bathrooms). We should adopt the recommendations of Equality & Human Rights commission that a minimum of

Customer Ref:  Response Ref:

Name

Response Type

On behalf of:

Supporting Info

Email

10% of all new housing should be built to wheelchair accessible standards. There is also an urgent need for new private housing in Edinburgh that is suitable for older owner occupiers who are downsizing. The only way to free up larger family homes for sale to younger families, is by there being somewhere suitable for their owners (elderly couples facing decreasing mobility etc.) to move to. They do not want tiny flats in high rise blocks, with no greenspace and no parking spaces. Where are the smaller inner city courtyard developments with groundfloor apartments? Co-housing projects? Apartment blocks with shared facilities? Perhaps we should be building as many retirement complexes as student blocks..?Sustainability - no building on flood areas, no conversion of gardens into concreted private parking areas. All buildings to meet aspiration of net 0 greenhouse gases by 2045 (Climate Change Act 2019)

Choice **2 B**

**We want to revise our policies on density to ensure that we make best use of the limited space in our city and that sites are not under-developed. Do you agree with this? - Yes / No**

Short Response

**Explanation** But we have caveats. We are concerned that ensuring that 'sites are not under-developed' is another way of saying 'all sites must be high density' - and that that will lead to over-development and buildings that do not fit into their local context. We have questions: what would a minimum of 65/100 dwellings per hectare look like? What would "A vertical mix of uses to support the efficient use of land" mean, for instance, at the Seafield waterfront? How high is too high? Densely packed high rise blocks may be bearable IF the land next to the block is well-maintained usable greenspace, for play and exercise etc. and there is access to nature, eg. coastal path etc., - but may not be bearable if the blocks are just squeezed up close to each other with no open space around.

Choice **2 C**

**We want to revise our design and layout policies to achieve ensure their layouts deliver active travel and connectivity links. Do you agree with this? - Yes / No**

Short Response

**Explanation** Again, with some caveat. Yes, we'd want to see 'layouts delivering active travel and connectivity links'-- but NOT at the price of public transport and accessibility for older and disabled people.

Choice **4 A**

**We want to work with local communities to prepare Place Briefs for areas and sites within City Plan 2030 highlighting the key elements of design, layout, and transport, education and healthcare infrastructure development should deliver. Do you agree with this? - Yes / No**

Short Response

**Explanation** Yes, with caveats and while emphasising the importance of Local Place Plans. While we are very supportive in principle, a lot will depend on how this is implemented in practice. The relationship between Place Briefs and Local Place Plans needs to be explicit from the outset in terms of which mechanism has primacy and which shapes the other. We see the potential for confusion and potentially even conflict between the Council's commitment to use Place Briefs as a means of directing future development and in particular for all new housing sites, and Local Place Plans as a device to make planning more collaborative. The new Planning Act indicates that Councils merely have to show 'due regard' for LPPs which in our view could give them very little weight in the process of shaping what actually happens on the ground. Whereas Place Briefs could become the Council's default tool to inform communities what it plans to do, without really 'engaging' early with communities. LLCC supports making community involvement the sine qua non heart of the Place Brief (whether in the form of a LPP or otherwise). More specifically, we are concerned with the future development of the brownfield site at Seafield which abuts the community council areas of Portobello, Craigentiny and Leith Links. This site represents the single largest brownfield site in the City and is therefore inevitably in the minds of the planners and developers when seeking to meet the target that Edinburgh has for 40,000 new houses. We could see a potential muddle / conflict of Place Brief and LPP processes here. If the Council develops a Place Brief for the site, even with a full programme of community engagement, past experience tells us that the development of the site would quickly begin to become developer-led, leaving the community to play catch up and react to each developer's proposal in piecemeal fashion. This site is so significant in terms of the long term future of our three communities that the community councils have collectively agreed to get on the 'front foot' and call for a community led Master-planning exercise in conjunction with CEC. This will ensure that our concerns, in terms of ensuring the overall design, housing tenure mix, environmental quality and local economic impact align with the aspirations of all three communities and the wider city environment. In an ideal world and perhaps at some point into the future when the scope and purpose of Local Place Plans have been clarified and properly road-tested, this master planning exercise would reflect the LPP's of all three communities. But LPPs so far remain uncharted territory within Scotland planning system and we are not prepared to take that risk with the future of this strategically important site. The community must be involved in Master Planning and Place Briefs and not just 'relegated' to LPPs which may or may not turn out to have any actual clout.

Choice 4 B

**We want to support Local Place Plans being prepared by our communities. City Plan 2030 will set out how Local Place Plans can help us achieve great places and support community ambitions. - How should the Council work with local communities to prepare Local Place Plans?**

Short Response Not Answered

**Explanation** The Council should seek to work proactively with communities, via existing community groups (in our area, such as Leith Creative, Save Leith Walk, PLACE, Residents Associations, as well as local Community Councils) to support them in developing Local Place Plans. Support would entail allocating budget to fund a Community Learning / Development Officer to work with the community groups, widen engagement, organise events etc.. and funding for dissemination of information material etc. When a Local Place Plan is in development / in place, the Council must fully take account of it as one of the most important elements, that takes a central place in n Master Planning, creating Place Briefs, discussions with developers, and dealing with PANS and Planning applications.

Choice 5 A

**We want City Plan 2030 to direct development to where there is existing infrastructure capacity, including education, healthcare and sustainable transport, or where potential new infrastructure will be accommodated and deliverable within the plan period. Do you agree with this? - Yes / No**

Short Response

**Explanation**

We support this, because - obviously - development cannot proceed where there is no appropriate infrastructure. But we have many caveats. We are not convinced either that existing infrastructure can cope (Leith area) or that new infrastructure is properly provided for within current planning processes. We are very clear that the city needs to be building new communities, not just new houses. That means, for larger scale sites, Master Planning and Place briefs, in collaboration with local Place Plans developed by the community, that include/integrate within the design of new developments the key elements of a mini village - not just tacking on, in the final stages of the planning process, a 'bill' to developers, for a financial contribution towards 'infrastructure' (unspecified). The city must definitely not be prepared to 'waive' infrastructure contributions from developers, or to spend these in ways that actually do not directly benefit the inhabitants of new developments and their immediate neighbourhoods. While planning new building, Edinburgh needs to recognise and act on the need to protect and support existing communities. New developments of scale must not simply be allowed to 'leech' on the infrastructure of existing communities. In this respect, we have severe reservations about CEC's stated intention to 'direct development to where there is existing infrastructure'. In and around Leith, this has arguably already been done to saturation point. It cannot continue unabated - new infrastructure must always accompany new building whether the building is on brownfield sites or on the edge of the city. Building new communities and protecting existing communities is something that Edinburgh has failed to do well, so far. New housing developments seem to either 'leech' on existing communities leading to increasingly overcrowded schools, healthcare facilities, parks and buses, or else (when on the outer fringes of the city, turn into rather isolated 'dormitory towns' that do not include commercial / light industrial sites that might afford local employment opportunities, and that often require car use to access basic facilities such as schools, supermarkets, leisure facilities, good quality greenspace etc. Developers need to be held to account to ensure that they provide infrastructure alongside profitable (for them) housing. Design needs to:

- Focus on the people who will inhabit the new developments.
- Reduce the need for inhabitants to travel for employment, leisure etc. (whether into the town centre, or out of town) by providing local employment opportunities.
- Respect the character of existing neighbourhoods.
- Support / develop local High Streets and small scale local commercial centres, and stop permitting / building out of town malls.
- Provide good quality greenspace in proportion to the density of new housing, along with a commitment to ongoing maintenance of greenspace.
- Provide for local active travel and connectivity within the development, eg. path networks, cycle routes.

In/ on the fringes of our (Leith Links) area, where there are likely to be many new developments, of high and dense housing (for example, the proposed Seafield site), increase in population density must be matched by a clear increase in not only the usual (electricity, water, sewage etc.) but also a mandatory matching increase in:

- Schools, Health and Transport infrastructure (see below)
- Public green space, outdoor leisure / sports facilities, play facilities
- General amenity such as attractive building design that is in proportion with neighbouring buildings (height, density), and protection of /or creation of attractive vistas.
- Commercial / light industrial infrastructure such as small workshops, garages, DIY outlets
- Social infrastructure such as libraries, community meeting space, shared co-working space, etc. as well as retail.

Education Infrastructure Urban Area Sites (Choice 12, Option A and/or Option C) LLCC strongly supports proposal to

Email: secretary@leithlinksc.org.uk

build both new non-denominational Primary Schools and a new Secondary school in North Edinburgh – Leith specifically. In Leith, the local population has already grown extraordinarily rapidly due to lower house prices / rents and high density housing being built in brownfield sites across the area. Local schools are already bursting at the seams. Class sizes have been increasing and parental choice is reduced, because of this congestion. Further house building within the area is bound to continue apace and to accelerate under both Options A and/ or C) which will make this issue even more urgent. Because greenspace is at a premium in this very densely populated part of North Edinburgh, •No new school should be built on what is currently greenspace •No new school should be built without including an area of open greenspace in its design •All new schools should include not only greenspace for play /sport, but, with an eye to climate change and sustainability, healthy eating etc., some space for planting and growing. HealthCare Infrastructure The population in Leith has already grown rapidly due to high density housing being built in brownfield sites across the area. This is likely to continue / accelerate in the future under both Options A and/ or C, there is an urgent need for more local Primary HealthCare facilities, especially GP services, but also including community pharmacies, and ancillary services (particularly needed by an ageing population) such as chiropody, physiotherapy, etc. A (mobile?) Minor Injuries Unit located in Leith would be desirable since it is impossible to get to the Western General Hospital by public transport from Leith without changing buses (at Crewe Toll) or having to walk half a mile. Transport Infrastructure / Connectivity Leith should be well connected to the city /centre by the tram but there is a marked lack of connectivity to other parts of the city, to the west and east, eg. to the Western General Hospital, and to Portobello & Musselburgh, and direct links to Park and Ride facilities; this needs to be addressed by a review of bus routes (Lothian Buses). If necessary, CEC should subsidise bus routes that are not profitable, e.g. to Western General from Leith. Like other European cities transport in Edinburgh should be integrated where one ticket allows commuters to travel using bus and tram. Connectivity should be easy to follow through the use of user friendly route planning and timetables. Sewage Infrastructure Local Development Plan (2016) policies under revision: Provision of New Waste Management Sites (RS 3) Waste Disposal Sites (RS 4) LLCC represents the community on the Seafield Wastewater Treatment Plant Stakeholder Group. We welcome the recent commitment by Scottish Government to build a new state of the art sewage works on the current site, in future. Any new plant must be future-proofed and have built-in capacity to service the needs of the growing population of Edinburgh and the Lothians over the next century. The current sewage plant is demonstrably not fit for purpose. For years, citizens living in Leith have had to endure disgusting smells of human waste coming from the Seafield Waste Water plant which is operated by Veolia on behalf of public body, Scottish Water. The local community - having been promised on a regular basis that measures would be taken to reduce odour emissions - continue to live with a seriously 'bad neighbour' where managers react to, rather than managing, areas/processes within the Seafield complex where problems occur on a regular basis. Odour emissions can be traced to uncovered primary settlement tanks and/or storm tanks but the current operators consistently fail to take action timeously to prevent the public being subjected to disgusting smells. This is a major issue to be considered in the plan to build large numbers of new houses on adjacent brownfield areas at Seafield. How 'livable' can these new homes be, if the Council consistently fails to enforce the Code of Practice on odour, at the Seafield plant? Any new sewage works should be designed to cope with increases in population and should be capable of eliminating (rather than just 'managing' (or NOT managing) as at present) odour emissions. The new plant should fit into the local MasterPlan / Place Brief, and the coastal path route should be able to pass the plant without knowing it was there. There are examples of excellent sewage works in other countries, for example New York. Scottish Water could organise an international design competition to provide a 21st Century Edinburgh with sewage works to be proud of, with green credentials. Roads / Access - The road (and bridge) along from Leith Links to the roundabout at Portobello needs to be redesigned.

Waste Sites Access to the current Waste Disposal Site is currently dangerously situated on a bend

Choice **5 D1**

**We want to set out in the plan where development will be expected to contribute toward new or expanded community infrastructure. Do you agree with this? - Yes / No**

Short Response

**Explanation** Absolutely! This is fundamental. Developers have got away for far too long with making only minimal contributions to community infrastructure. The level of developer contributions should be raised considerably. We are emphatically clear that developers of student accommodation must be required to contribute equally, alongside developers of all other types of housing etc. It is unacceptable for them to be allowed to 'pick and choose' as to which services their residents might be likely to use, in a neighbourhood. That is not how things work - if they are in a community, they are part of the community and should contribute as all other community members do.

Choice **5 D2**

**We want to use cumulative contribution zones to determine infrastructure actions, costs and delivery mechanisms. Do you agree with this? - Yes / No**

Short Response

**Explanation** No sure. We are interested by the concept of 'cumulative contribution zones' whereby the impact of all developments within a defined zone on existing infrastructure is calculated together, with the cost then shared. We like the 'integrated approach' that this implies. But how could it be 'shared equally'? This requires some further explanation – surely developers of very large / dense housing developments should contribute more than small scale developers?

And what if there is a 'time lag' between the first stag of building in a large site, and the later and final stages. Does the overall/shared developer contribution have to be held up until the site is completed? That would not be helpfui.

**We want to create a new policy that assesses development against its ability to meet our targets for public transport usage and walking and cycling. These targets will vary according to the current or planned public transport services and high-quality active travel routes. Do you agree with this? - Yes / No**

Short Response: Yes

**Explanation** Yes but this approach does not give adequate weight to accessibility issues. LLCC is anxious to ensure that accessibility is given adequate consideration in all design guidelines and planning. While we support Active Travel, it is not possible for everybody. Over-emphasis on cycling and walking risks excluding older and disabled people. Their voices are just not heard in the standard kind of online consultation for the simple reason that many of them cannot access / are also excluded from that communication method Statutory consultation on accessibility tends to focus predominantly on wheelchair users , and those with sensory impairments, eg. blind and visually impaired people. Both of these are, of course, important, but these conditions affect a relatively small percentage of the population. We would stress that a much larger number of citizens may not have a wheelchair or a white stick but equally / also have disabilities that impair their mobility, to a greater or lesser extent, due to them just being older (slow walking, lack of strength / energy/stamina, arthritis in hips and /or knees, poor balance etc.) With an ageing population, this is a substantial proportion of the citizenry of Edinburgh. Many illnesses and disabilities – or intermittent or ‘transient’ conditions – that cause pain and that limit mobility are ‘hidden’ – such as ME, fibromyalgia, MS, Parkinsons etc. Other citizens have congenital or acquired cognitive impairments such as learning difficulties, autism, stroke etc. that mean that they cannot travel alone but may need carers with them. ALL of these people need a livable and accessible city. But many/most of them will not be able to walk far, or cycle. They are likely to need:

- Ground floor living, and/or flats that are designed with lifts to all floors
- Wide, well-maintained pavements
- Public transport that offers
- Bus stops that are not too far apart (200-300 metres is more realistic than 400 metres)
- Buses with space for wheelchairs (as well as prams/buggies) and for users of rollators (also perhaps for foldable electric mobility scooters (or trams and trains, if not on buses)
- Buses that go where people want to go (a variety of peripheral routes, not just all into the city centre).
- Bus routes that allow for a single through journey, not all via ‘Hubs’ that will mean getting on and off several buses and waiting around for bus transfers (dangerous in bad weather).
- Far access (to their homes, and to public areas and retail centres)
- Parking spaces at their homes, and around public areas and retail centres.
- Roads and parking spaces for delivery vehicles

**We want to use Place Briefs to set the targets for trips by walking, cycling and public transport based on current and planned transit interventions. This will determine appropriate parking levels to support high use of public transport. Do you agree with this? - Yes / No**

Short Response

**Explanation** Yes with caveats. But increasing parking restrictions must be done only if and when the corresponding improvement in public transport , disabled access, and in pedestrian and cycling infrastructure are in place. We recognize and accept that reducing parking is one way to reduce emissions and to reduce congestion and make the city, and new housing development, more 'livable. But -• Apart from some basic 'sorting out' of few stops that are historically misplaced, there should not be a 'policy-based' reduction in the number of bus stops / lengthening of the distance between bus stops, as this is discriminatory towards older people and those with disabilities, also potentially parents of small children. •As 'general' parking is progressively reduced, there needs to be consideration of increasing the number of disabled pick up / drop off points, and parking spaces.

Choice **7 A**

**We want to determine parking levels in development based on targets for trips by walking, cycling and public transport. These targets could be set by area, development type, or both and will be supported by other measures to control on-street parking. Do you agree with this? - Yes / No**

Short Response

**Explanation** Yes with caveats. LLCC broadly supports the aim of reducing car use in Edinburgh. But we think there is too much emphasis placed on cycling, and not enough on walking and public transport. Not everybody can cycle. Once again, LLCC is anxious to ensure that accessibility (see above) is given adequate consideration in all planning, bearing in mind the ageing population and the reliance that older and disabled people have on car use and public transport. Public transport (Lothian Buses) is not terribly accessible. Bus routes and ind parking policies are currently not well-adapted to the day to day travel patterns of our diverse, and ageing population. City Planners seem to be locked into a 'male -centred' (and increasingly out of date) uni-dimensional 'commuter' view of travel – i.e. that people leave their home in the mornings, travel into town (or wherever) to work, stay there all day, and then travel back again, on the same route in the evening. In fact, more and more people are self-employed, or work part-time, may work several jobs, work shifts, may work from home. Pensioners do a lot of child-care, may be healthier and do part-time work or volunteering, and need to get out and about for physical and mental well-being. Research shows that women make more use of public transport than men, but have been shown to 'trip chain' rather than to commute i.e they plan their travel around a list of tasks, both family related and work related, and make a larger number of shorter trips 'around and about' to various destinations linked to this sequence of tasks, rather than a repeated single long daily trip. Walking and bikes may be part of this, but it is difficult to pick up toddlers from nursery, or to take an elderly relative to the doctor, by bike. They need public transport - and cars, if the public transport routes are not flexible enough to cover their needs. We recognise that parking restrictions are necessary. Some observations:

- Leith has particular parking problems already due to being a tenanted, high population density area. Because so many new homes are / will be being built on brownfield sites in Leith, with few or no parking spaces provided within the developments, the pressure on on-street parking in Leith will become intolerable.
- There has to be some kind of 'enforcement' so that people buying flats in new developments without parking spaces cannot just keep their car nearby, on-street. For a start, they cannot be allowed to purchase Residents Parking Permits for the area, once a CPZ is introduced in Leith Walk and Leith.
- A CPZ is only a partial solution in an area where there are already not enough parking spaces for existing residents.
- Consideration needs to be given to the fact that a CPZ is introduced in Leith Walk and Leith, just pushes the problem on to the areas at the fringes of the zone. i.e. to Leith Links. Flexible solutions, perhaps along the lines of the Priority Parking system need to be found for our area.
- As 'general' parking is progressively reduced, there needs to be consideration of increasing the number of disabled pick up / drop off points, and disabled parking spaces, both in local neighbourhoods (eg for attending doctor, church, community events) and in the city centre (for shopping, socializing, culture etc.), or Edinburgh will become progressively inaccessible to older citizens and to disabled people.

Short Response

**Explanation**

Cars will still / always be needed /used, so progress towards small electric vehicles is important, and parking will still be required for these. •Car Club is not a viable solution for reducing car ownership and use until they have sorted out charging issues for electric vehicles. •Parking for bikes is much needed but there is a huge security problem - bike theft is rife across the city – so better, more weather proof and more secure bike parking solutions must be found. •Many cycle routes in the city are unsafe, these need to be segregated from traffic. Specifically, cycle routes through Leith, and along the tram route beyond the foot of Leith Walk, need attention. •Disabled people might need parking spaces for a car or taxi loading point, but they may use mobility aids - their own form of 'active travel' - perhaps we need to be looking at charging stations for electric wheelchairs and mobility scooters, as well as 4 wheeled vehicles? LLCC broadly supports the aim of reducing car use in Edinburgh. But we think there is too much emphasis placed on cycling, and not enough on walking and public transport. Not everybody can cycle. Once again, LLCC is anxious to ensure that accessibility (see above) is given adequate consideration in all planning, bearing in mind the ageing population and the reliance that older and disabled people have on car use and public transport. Public transport and parking policies are currently not well-adapted to the day to day travel patterns of our diverse, and ageing population. City Planners seem to be locked into a 'male-centred' (and increasingly out of date) uni-dimensional 'commuter' view of travel – i.e. that people leave their home in the mornings, travel into town (or wherever) to work, stay there all day, and then travel back again, on the same route in the evening. In fact, more and more people are self-employed, or work part-time, may work several jobs, work shifts, may work from home. Pensioners do a lot of child-care, may be healthier and do part-time work or volunteering, and need to get out and about for physical and mental well-being. Research shows that women make more use of public transport than men, but have been shown to 'trip chain' rather than to commute i.e they plan their travel around a list of tasks, both family related and work related, and make a larger number of shorter trips 'around and about' to various destinations linked to this sequence of tasks, rather than a repeated single long daily trip. Walking and bikes may be part of this, but it is difficult to pick up toddlers from nursery, or to take an elderly relative to the doctor, by bike. They need public transport - and cars, if the public transport routes are not flexible enough to cover their needs. Some further observations: •Park and Ride LLCC supports the principle of Park and Ride, and the safeguarding of sites for this use. The problem that we have in Leith is that there is no Park and Ride adequately serving the north east of the city. The residential eastern reaches of Leith Links – our area - is BECOMING a de facto on-street Park and Ride, because of this, and this is likely to get worse when the tram is up and running. Extending parking restrictions down Leith Walk and into Leith will just make the problems worse for our area, as it will push the parking problems to the edges of the controlled parking zone. We need better Park and Ride facilities serving the NE of the city. Extension to the New Craighall P & R might help, so we would certainly support that. Instead of just running buses into the centre of the city from there, buses should run into Leith, or to the centre via Leith. And / or - could a further smaller Park and Ride site be identified, in collaboration with East Lothian, on the fringe of Musselburgh, with buses running into Leith? Parking We recognise that parking restrictions are necessary. Some observations: •Leith has particular parking problems already due to being a tenanted, high population density area. Because so many new homes

Customer Ref:  Response Ref:

Name

Response Type

On behalf of:

Supporting Info

Email

are / will be being built on brownfield sites in Leith, with few or no parking spaces provided within the developments, the pressure on on-street parking in Leith will become intolerable. • There has to be some kind of 'enforcement' so that people buying flats in new developments without parking spaces cannot just keep their car nearby, on-street. For a start, they cannot be allowed to purchase Residents Parking Permits for the area, once a CPZ is introduced in Leith Walk and Leith. • A CPZ is only a partial solution in an area where there are already not enough parking spaces for existing residents. • Consideration needs to be given to the fact that a CPZ is introduced in Leith Walk and Leith, just pushes the problem on to the areas at the fringes of the zone. i.e. to Leith Links. Flexible solutions, perhaps along the lines of the Priority Parking system need to be found for our area. • As 'general' parking is progressively reduced, there needs to be consideration of increasing the number of disabled pick up / drop off points, and disabled parking spaces, both in local neighbourhoods (eg for attending doctor, church, community events) and in the city centre (for shopping, socializing, culture etc.), or Edinburgh will become progressively inaccessible to older citizens and to disabled people.

Choice **7 D**

**We want to support the city's park and ride infrastructure by safeguarding sites for new park and ride and extensions, including any other sites that are identified in the City Mobility Plan or its action plan. Do you agree with this? - We want to support the city's park and ride infrastructure by safeguarding sites for new park and ride and extensions, including any other sites that are identified in the City Mobility Plan or its action plan.**

Short Response

**Explanation** LLCC supports the principle of Park and Ride, and the safeguarding of sites for this use. The problem that we have in Leith is that there is no Park and Ride adequately serving the north east of the city. The residential eastern reaches of Leith Links – our area - is BECOMING a de facto on-street Park and Ride, because of this, and this is likely to get worse when the tram is up and running. We also want the City Plan 2030 to include any new strategic active travel links which may be identified in the forthcoming City Plan 2030 Transport Appraisal, the City Mobility Plan, or which are identified through this consultation. Do you agree with this? - Upload new cycle routes**

Short Response

Explanation

Choice 9 A

**We want to consult on designating Edinburgh, or parts of Edinburgh, as a 'Short Term Let Control Area' where planning permission will always be required for the change of use of whole properties for short-term lets. Do you agree with this approach? - Yes / No**

Short Response

**Explanation** Emphatically yes, absolutely! And quickly! We strongly support the proposal to introduce Short Term Let Control Area, for the City of Edinburgh as a whole. and without exception. We absolutely do not support the idea of introducing STR Control Areas selectively in just one or two parts of the city. Air BnB and similar, and other Short Term Rentals are spread very widely throughout the city and not restricted to particular neighbourhoods. We also strongly support creation of a (hopefully very robust and strongly enforced!) new policy on the loss of homes to alternative uses, requiring planning permission for a change of use of residential flats and houses to short-stay commercial visitor accommodation or other uses. As other groups such as PLACE Edinburgh have described in great detail, the current high level of short term rentals is seriously damage our city, and the well-being of our citizens. It affects housing availability, affordability and livability, We support a clear policy such as Genuine home sharing - no change of policy Licensing needed for whole home letting Whole home letting - no more than 4 per year, no more than 1 in the same month. We do not support the building of more student accommodation in areas that have traditionally been homes. We do not support the change of use to yet more hotels and guest houses in areas that have traditionally been homes.

Choice 9 B

**We want to create a new policy on the loss of homes to alternative uses. This new policy will be used when planning permission is required for a change of use of residential flats and houses to short-stay commercial visitor accommodation or other uses. Do you agree with this? - Yes / No**

Short Response

Explanation Again, emphatically yes! Such a policy is urgently needed to protect housing for people to live in and to bring housing back into use. And leaving homes empty should be included as an 'other use' that needs change of use planning permission, to try and encourage properties back into use.

Choice 10 A

**We want to revise our policy on purpose-built student housing. We want to ensure that student housing is delivered at the right scale and in the right locations, helps create sustainable communities and looks after student's wellbeing. Do you agree with this? - Yes / No**

Short Response

Explanation We strongly support the proposal to update, revise and to firm up into policy, the guidelines on student accommodation and ask urgently for new research on the numbers and distribution of students across the city, as we feel that the data on which developers currently make their claims of 'need' for more student accommodation, are flawed (there is a severe underestimation of the number of students living in the Leith Walk area for example)> In particular we support the requirement that there has to be a direct relationship between student accommodation and specific universities or colleges, this is not an appropriate area for 'speculative building' by profit hungry corporations that have no interest in the city or in higher education, but merely in their own profits.

Choice **11 A**

**We want to amend our policy to increase the provision of affordable housing requirement from 25% to 35%. Do you agree with this approach? - Yes / No**

Short Response

**Explanation** Emphatically Yes. And emphatically this should include ALL all housing development, including student accommodation. We suggest that for developments less than 12 units there should still be a level of affordable housing required, although perhaps on a sliding scale of 25% down to the smallest developments of 4 units. Social rented units are the most urgently needed. Most so called 'affordable housing' is not in fact affordable for very many people in our community, even those who are working, but who are on low wages. We would support a review of how affordable housing is defined to reflect average wage levels within a given locality. We would support the policy that affordable housing managed by registered social landlords should be let at social rents rather than market rents. In Leith, as elsewhere, to be able to buy a house people currently must move out of the city often to Mid or West Lothian, and then may have to commute in for work, leading to increased car use, traffic congestion, air pollution etc. We strongly support an absolute requirement that all affordable housing per development should be delivered on-site (i.e. not waived / 'relocated' to somewhere else in the city). We would very much like to see more homes, including affordable homes, right in the city centre. We would like to see a city where citizens can afford to stay in the area where they belong, if they wish to, and within easy reach of their workplace by active travel or public transport..

Choice **11 B**

**We want City Plan 2030 to require a mix of housing types and tenures – we want the plan to be prescriptive on the required mix, including the percentage requirement for family housing and support for the Private Rented Sector. Do you agree with this? - Yes / No**

Short Response

**Explanation** And also with a target of at least 10% for accessible homes. Developments should ensure 'tenure blind' design whereby affordable and market housing are mixed/ indistinguishable.

Choice 12 A

Which option do you support? - Option 1/2/3

Short Response: Option 1 (Council/

**Explanation**  
Option 1 with caveats, see below  
Maybe Option 3a on a small scale - While we think that most new development should be on brownfield sites within the city, we do feel that there is scope for release of some Greenfield land, on a very limited scale. Specifically, we support the Cockburn Associations' suggestion that greenfield land could be released at Area 3 - Kirkliston, provided that adequate new infrastructure is also provided, particularly a new High School. LLCC primarily supports Options 1 but with some important caveats!  
To avoid overcrowding, and to create new communities that are truly livable 'places', brownfield site development must include:  
1. Better support of existing infrastructure and addition of significant new local infrastructure (See Choice 5)  
2. Better / Increased recognition of the value of greenspace • No loss of existing greenspace, minimum tree loss, new tree planting • Addition of good quality new greenspace • Emphasis on ongoing good management of greenspace • In Leith / Seafield / Portobello specifically, emphasis on both greenspace and also access to the shore and 'linear park' in the form of a coastal path / cycleway linking Portobello beach through Leith to Newhaven, Granton, Cramond.  
3. Better engagement and collaboration with the local community to ensure that the context of specific sites, the character of existing neighbourhoods and the needs of the local community are well understood.  
4. Better data, to evidence needs, and to tailor design to need – not only need for new housing, but the need of the local community for new development that 'fits' the local neighbourhood.  
5. Real 'mixed use' to promote /support small businesses, both in retail but also on commercial / light industrial sites, to provide local employment, reduce the need for travel and preserve the character of the neighbourhood.  
6. Better, more imaginative and innovative, and more local design that respects the local neighbourhood context.  
7. More integrated and coordinated design, by requiring, for larger sites, different developers to collaborate and work together on design within an overall Place Brief that respects the local context.  
8. More localized, integrated, and coordinated development, by requiring, for larger sites, all the different developers to collaborate and work within an overall Place Brief that respects the local context.  
9. Better housing quality standards – need for reassessment, we cannot keep building 'shoeboxes' of minimum size.  
10. MUCH higher 'green' standards must be an obligatory factor in new housing standards. E.g. all roofs must include solar panels/power collection. II New housing development on brownfield sites must -  
1. Provide the kind of housing that is most urgently needed. In the Leith area, that LLCC represents, that is predominantly social housing and affordable housing. Not high priced market homes  
2. The homes should be delivered by the Council and its Partners Ideally, if possible, new market housing should be sold only to people who are going to live in the development, or to Edinburgh-based - not to overseas property investors, global corporations, property speculators, absentee buy-to-let landlords. Housing is a human right, not a commodity. III AIRBNB and other Short Term Rentals across the city need, very urgently need to be reduced in number, and the properties returned to the housing stock of the city for 'ordinary' long term residential rental (or sale). We support introduction of STR Control city-wide, see Choice 9 This cannot be achieved without immediate changes to legislation, by-laws and policies, which must be implemented immediately as possible. Enforcement of said laws and policies must be carried out rigorously. IV Student Housing We strongly support the intention to revise and turn Guidance on Student Housing into firm policy. See Choice 10 We feel that student accommodation has already reached saturation point, in Leith, and should not be expanded any further. Indeed, contraction of existing provision may be

indicated. Especially following the COVID-19 outbreak, whose long term effects are likely to include a significant reduction in the numbers of overseas students seeking to travel to study/live in Edinburgh. Having said that - All / any student housing that is built must be required to to able to be turned back into housing units if/ as and when required.

Choice 16 H

**We want to introduce a policy that provides criteria for locations that we would support city-wide and neighbourhood goods distribution hubs. Do you agree? - Yes / No**

Short Response

**Explanation** We certainly see a great need for more locations around Leith for goods distribution hubs. Leith used to have lots of railway land and many large 'goods yards', but much of this land has now been lost to housing. The only possible way to reduce vehicle use is to reinstate areas on the edge of Leith where large delivery vehicles can offload. The eastern edge of the docks, Seafield end, would be well suited for this. Therefore it should not be swallowed up by new building of houses, office /business units. We'd like to see compulsory purchase by the council of the land along Marine Drive, to the west of the Sewage plant, along to the docks. This land, currently owned by Forth Ports, is not used, nor is it maintained by FP. It is a known blackspot for (literally) industrial scale fly-tipping. It should be returned into use as a goods distribution hub, with a green corridor through it for a coastal path and access to the shore.
