

## **Integrated Impact Assessment – Statement Development and Business Services**

This budget saving is to reduce the net cost of delivering the Planning, Building Standards and Regulatory services of the Council. It is expected that the final plan will include:

- a new approach to setting **fees** for services that regulate economic activity;
- to generating income from **commercial activity** related to that;
- a thorough review of future service **capability and resources**, to not only reduce costs, but ensure that service resources and capabilities are better aligned to outcomes and financial strategy. This is likely to require organisational review early in the process.

It is intended to prepare an Integrated Impact Assessment for the income and capability and resources elements of this separately at the appropriate time.
